

# The clinical value of the AURIA Breast Cancer Screening

Hi, I'm Dr. Sodano, the director of clinical support and education at Evexia Diagnostics.

I'm honored to introduce to you a cutting-edge lab test called the Auria test. This test utilizes tear fluid to screen for breast cancer. It has been shown that tear fluid is a dynamic environment rich in both proteomic and genomic information, which makes it an ideal medium for exploring the potential for biological testing modalities.

The term proteomics is defined as the study of the structure and function of proteins, including the way they work and interact with each other inside cells. The value of proteomic testing of the tears as it relates to the Auria test is in "early detection", where the breast cancer is more treatable.

As you may know, there is a growing body of evidence to support tears as a non-traditional biological fluid in clinical laboratory testing. In addition to the simplicity of tear fluid processing, the ability to access key cancer biomarkers in high concentrations quickly and inexpensively is significantly enhanced.

It's important to know that this test is intended for women over the age of 30, not diagnostic for breast cancer and not intended as a replacement for mammography, and that test results need to be clinically correlated with structural examination of breast tissue.

The Auria test is an "at-home test that has about a 92% sensitive and 54% specificity for the detection of breast abnormalities.

## BREAST CANCER FACTS:

Screenings for women under 40 are not accessible.

Early-stage detection of breast cancer has a 5-year survival rate of 99%.

1 in 8 women in the U.S. will develop invasive breast cancer.

89% of women diagnosed with breast cancer have no family history.

50% of women miss their annual screening.

***Auria, the first home breast cancer screening test for women over the age of 30.***

# The clinical value of the AURIA Breast Cancer Screening

Here are some Evexia Nutraceuticals™ recommendations related to hormone balance for your patients:

**PRO BALANCE (FOR WOMEN)** – Pro Balance (For Women) supports classic herbal hormonal balancing in the form of vitex, polyg-onum, black cohosh, along with DIM and chrysin for protection and support of beneficial estrogen aromatase activity. Calcium-D-gluca-rate promotes the proper elimination of excess estrogens. Resvera-trol and EGCG from green tea are included for maximum antioxidant protection. Vitamins B6, B12, and folate promote proper cell differ-entiation. Magnesium and calcium are also included to help support bone and hormone health

**BALANCE DIM** – Balance DIM provides 100 mg per softgel of diindolylmethane (DIM), a compound that helps to support healthy estrogen metabolism. Due to its crystalline structure, absorption of DIM is minimal when given orally. For this reason, Balance DIM has been manufactured utilizing a proprietary process, which improves the absorption of DIM. This process utilizes a proprietary blend of MCT oils, non-soy derived lecithin, and vitamin E without the use of potentially harmful surfactants. Research tells us that a low level of 2-hydroxyestrone and a high level of 16 alphahydroxyestrone are not desired. DIM works by helping to increase 2-hydroxyestrone and therefore improves the 2/16 hydroxyestrone ratio

**ADRENAL COMPLETE** – Adrenal Complete is a glandular-based product designed to support overall adrenal function. Fortified with N-acetyl tyrosine, vitamin C, and a comprehensive spectrum of B vitamins, it is ideal for those under chronic stress due to its ability to help balance cortisol and replenish catecholamines

**ADRENAL PLUS** – Adrenal Plus supports adrenal cortical and medullary function by providing a combination of adaptogenic and adrenal tonic herbs such as Eleuthero, American Ginseng, Ashwa-gandha, Rhodiola, Licorice and vitamins that are essential to adrenal function. These ingredients are combined to synergistically promote proper homeostasis of serum cortisol, help to promote healthy HPA axis function and aid in the production and replenishment of de-pleted catecholamines, support adrenal cortical health, and replete common nutritional deficiencies that can result from chronic stress.
